

Please do not allow cell phone use on airplanes. One is limited in movement and privacy; you cannot simply move away from someone talking on a cell phone. My privacy would be invaded by someone who could talk for hours on a cell phone so I am forced to hear a one way conversation even though I might be reading a book or doing work or just trying to sleep. I think you will find that people will be rude and uncivil to each other and possibly fights could break out (if we have road rage when we are not even in the same vehicle, think how it will be to sit next to someone who is unconcerned for your well being on a long flight.) I think each passenger in limited quarters should be allowed to have what little space they can. Thank you.
